SETUP GUIDE · PART 1 OF THE MANUAL

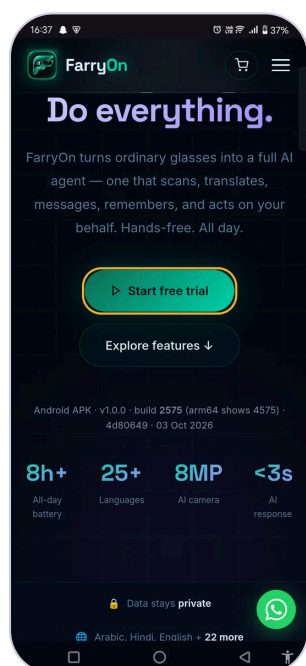

Getting started with FarryOn

From downloading the app to your first conversation with Farry — about five minutes. Every step below has a real screenshot, with the button to press marked in **orange**.

Before you start

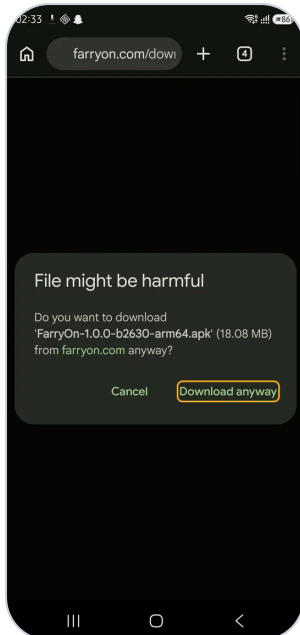

- An **Android phone** (Android 7 or newer). An iPhone version is not available yet.
- An **internet connection** (Wi-Fi or mobile data).
- An **email address** you can open on your phone — or a Google account.
- Smart glasses are **not** needed to start. You can talk to Farry through the phone and connect glasses later.

1 Download the app

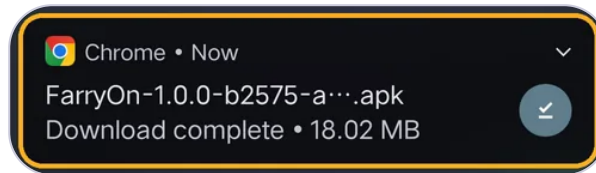

1. On your phone, open **farryon.com** in Chrome.
2. Tap **Try the app free** (or **Get FarryOn** at the top).

The app is downloaded straight from our website as an APK file (about 18 MB). It is not on the Google Play Store yet, so the next two screens show warnings that every app from outside the Play Store gets.

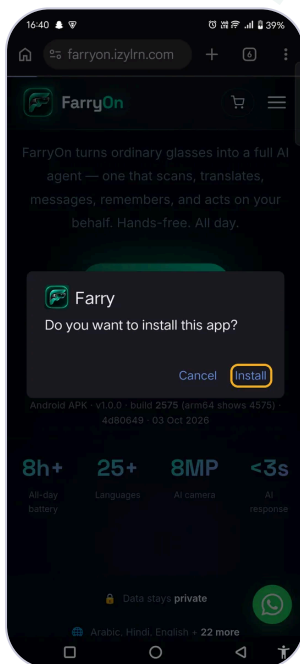

Chrome asks *“File might be harmful”*. This is Chrome's standard message for any app file. Check that it says **FarryOn** and **farryon.com**, then tap **Download anyway**.

When the download finishes, a notification appears. Tap it to open the file:

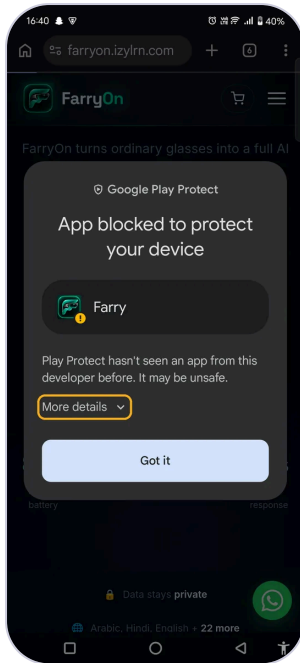

Missed it? Open Chrome's menu **:** → **Downloads** and tap the FarryOn file.

2 Install it

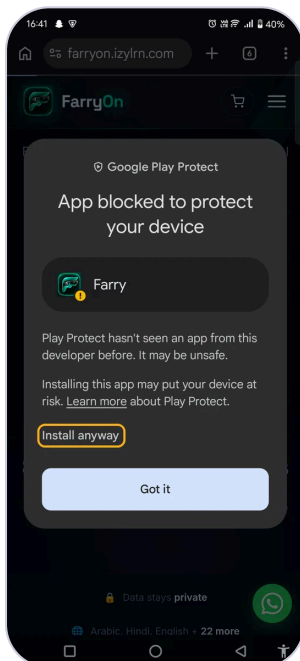

Tap **Install**.

First time installing an app from Chrome? Your phone may first show *“For your security, your phone is not allowed to install unknown apps from this source.”* Tap **Settings**, switch on **Allow from this source**, then press back — the install screen returns.

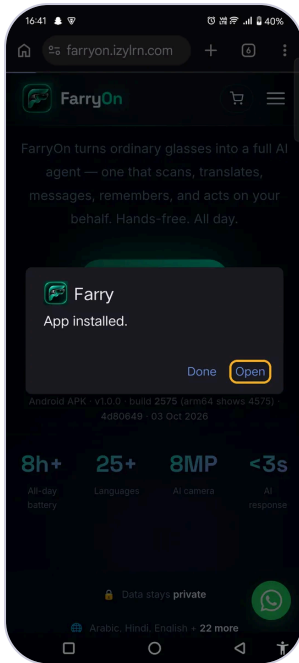

Google Play Protect may say *"App blocked to protect your device"*. It shows this for apps it hasn't seen before — FarryOn is new and not on the Play Store yet.

Don't tap **"Got it"** — that cancels the install. Tap **More details** instead.

Tap **Install anyway**.

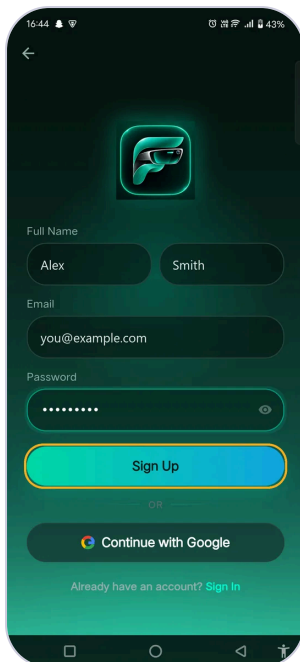

When you see *"App installed"*, tap **Open**. From now on you'll find FarryOn on your home screen as **Farry**.

3 Create your account

On the welcome screen, tap **Create Account**.

Already have an account? Tap **Sign In** and skip to [step 5](#).

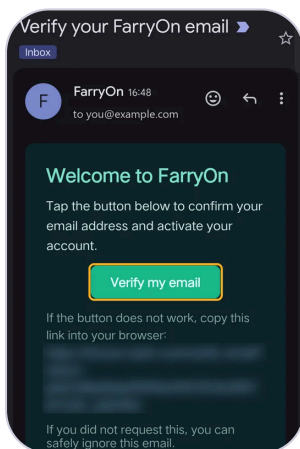

1. Enter your **first and last name**.
2. Enter your **email** — use one you can open, because we'll send a link to it.
3. Choose a **password** of at least 8 characters. Tap the eye icon to check what you typed.
4. Tap **Sign Up**.

The app shows *"Account created"* and takes you back to the welcome screen. Now check your email.

Prefer Google? Tap **Continue with Google** and pick your Google account. There's no password to make and no email to verify — skip to [step 6](#).

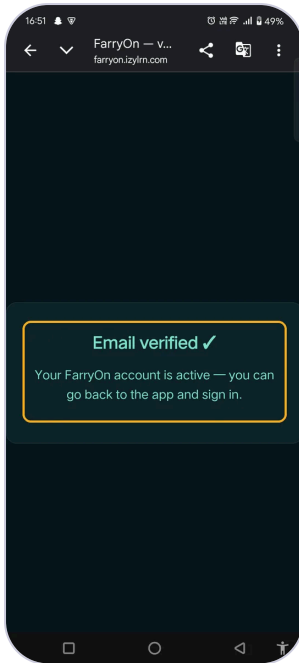

4 Verify your email

Within a minute you'll get an email from FarryOn: **"Verify your FarryOn email"**. Open it and tap **Verify my email**.

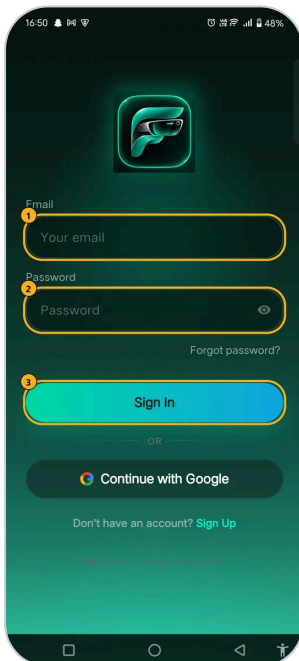

You can't sign in until this is done — it makes sure nobody else can open an account with your address.

No email? Look in **Spam, Promotions** or **Updates**. Still nothing after 5 minutes? Make sure the address was typed correctly, then contact us on WhatsApp.

A page opens saying **"Email verified ✓"**. Your account is active. Go back to the FarryOn app.

5 Sign in

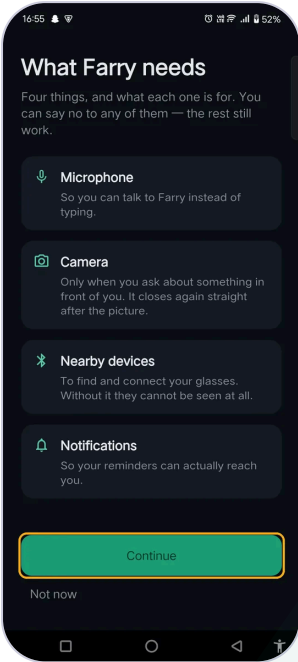

- 1 Your **full email address** (FarryOn has no usernames).
- 2 Your **password**.
- 3 Tap **Sign In**.

Forgot your password? Type your email in box 1 first, then tap **Forgot password?** — we'll email you a reset link.

You only sign in once. FarryOn keeps you signed in, even after you restart your phone.

6 Allow permissions

The first time you sign in, FarryOn explains what it needs and why:

Permission	What it's for
Microphone	So you can talk to Farry instead of typing.
Camera	Only when you ask about something in front of you.
Nearby devices	To find and connect your glasses.
Notifications	So your reminders reach you.
Location	For answers about where you are — nearby places, weather, directions.

Tap **Continue**. Android then asks for each one in turn.

Answer each Android pop-up like this:

Microphone → While using the app

Camera → While using the app

Nearby devices → Allow

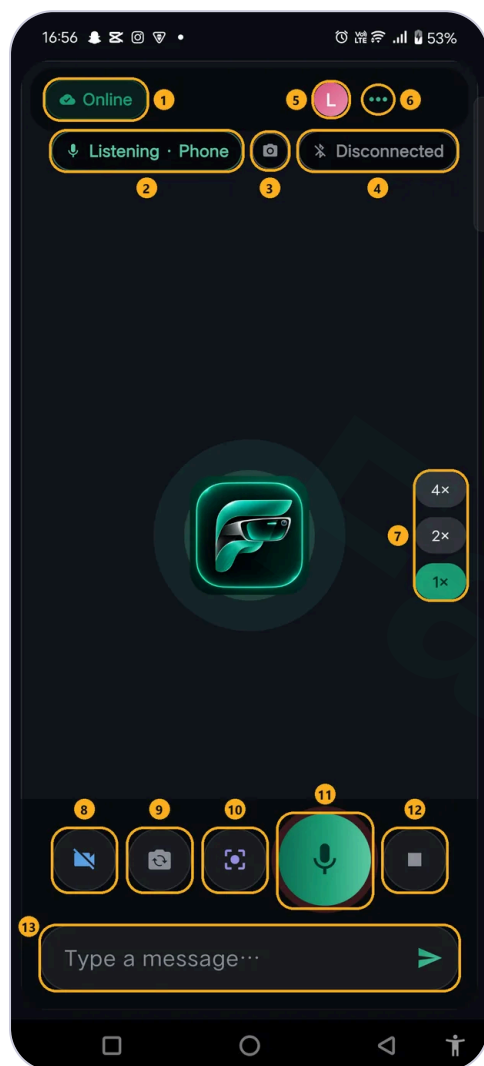

Notifications → Allow

Location → While using the app

Said “Don't allow” by mistake? Nothing breaks — only that feature won't work. To turn it back on: phone **Settings** → **Apps** → **Farry** → **Permissions**, and allow it there.

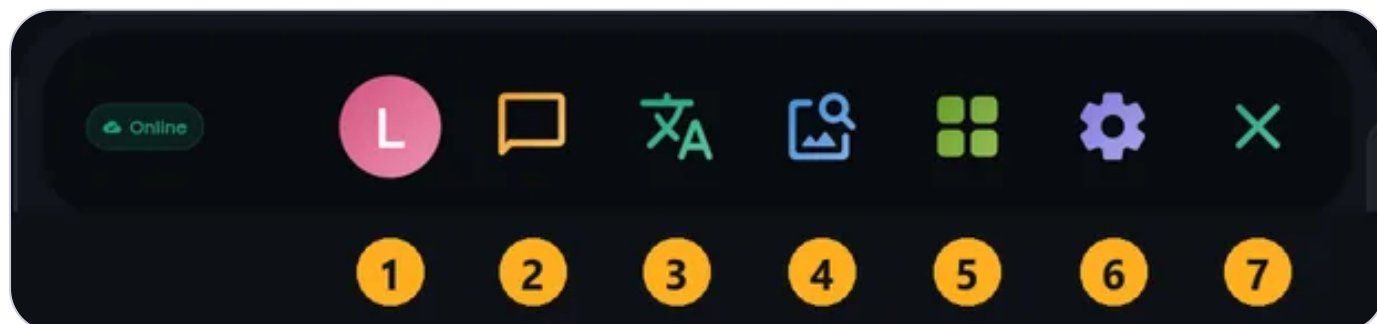

7 Your home screen

After the permissions, you land on the main screen. Farry is already listening — you can start talking straight away. Here is what everything does:

- 1 **Connection.** *Online* means Farry is reachable. *Reconnecting* or *Offline* means check your internet.
- 2 **Microphone.** Shows whether Farry is *Listening* or *Muted*, and which mic is in use — *Phone* or *Glasses*.
- 3 **Camera source.** Which camera a photo will come from — phone or glasses.
- 4 **Glasses.** *Disconnected* until you pair glasses; then it shows the model and battery.
- 5 **Your account.** Opens Settings.
- 6 **Menu.** Opens the toolbar shown below.
- 7 **Zoom** for the phone camera: 1×, 2×, 4× (or pinch the screen).
- 8 **Camera on / off.** Turn it on to let Farry see through your phone camera.
- 9 **Switch camera** between front and back.
- 10 **Identify.** Ask Farry what the camera is looking at.
- 11 **Mic button.** Green = listening. Tap to mute (turns red); tap again to listen.
- 12 **Interrupt.** Stops Farry mid-answer.
- 13 **Type a message** if you'd rather not speak.

The menu (tap ..., number 6 above)

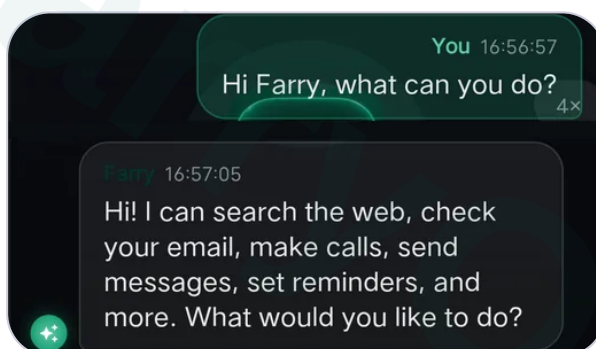

- 1 **Account** — opens Settings.
- 2 **Chat** — shows or hides the written conversation on screen.
- 3 **Live translation** — translate a conversation with someone in another language.
- 4 **Finder** — identify what's in a photo.
- 5 **Your stuff** — your notes, reminders and past conversations.
- 6 **Settings** — glasses, voice, languages, email, plan and more.
- 7 **Close the menu.**

8 Talk to Farry

Just speak — for example **“Hi Farry, what can you do?”** Farry answers out loud. Or type the same thing in the message box and tap the arrow.

To see the conversation written out, open the menu  and tap the **chat** icon:

Things to try next

- “Remind me to call Mum at 6 pm.”
- “Make a note: buy milk and eggs.”
- “What's the weather tomorrow?”
- Turn on the camera (8), point it at something and ask “What is this?”

Tip: Farry hears everything near the phone while the mic is green. In a noisy place, or when you're talking to someone else, tap the mic button (11) to mute.

? If something goes wrong

What you see	What to do
"App blocked to protect your device"	Tap More details → Install anyway (step 2).
"App not installed" or "conflicts with an existing package"	An older FarryOn is on the phone. Uninstall it first (long-press the Farry icon → Uninstall), then install again.
"An account with this email already exists"	You already signed up. Go back and tap Sign In . Forgot the password? Use Forgot password?
The verification email never arrived	Check Spam and Promotions. Check the address you typed. Then contact us.
"Incorrect email or password"	Use your full email address. Check Caps Lock. Or reset it with Forgot password?
"Verify your email first"	Open the email from step 4 and tap Verify my email , then sign in again.
The mic chip says <i>Muted</i>	Tap the big mic button (11) once.
Farry doesn't hear you	Hold the phone closer. Check that Microphone is allowed (step 6). The chip should say <i>Listening</i> .
The top shows <i>Offline</i>	Check your Wi-Fi or mobile data. FarryOn reconnects by itself.

Still stuck? Message us on WhatsApp — a real person answers.

SETUP GUIDE · PART 2 OF THE MANUAL

Connect your glasses

Pair your glasses once, and Farry hears you through them, talks into your ears and sees what you see. The screenshots show the **GS5 MAX**; the **GS4 MAX**, **L801** and **L802** work the same way.

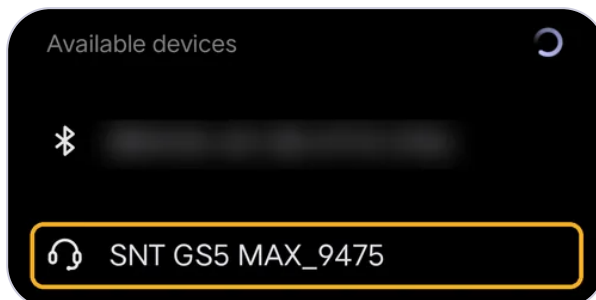

Before you start

- You've finished [Part 1](#): FarryOn is installed and you're signed in.
- Your glasses are **charged and switched on**.
- The glasses are **not connected to another phone**. Glasses talk to one phone at a time — if another phone has the FarryOn or HeyCyan app open, close it or turn its Bluetooth off.

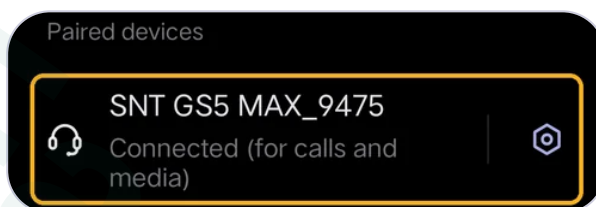

1 Pair them with your phone

This is what lets you **hear** Farry through the glasses and lets Farry hear you. You do it once, in your phone's own Bluetooth settings.

1. Open your phone's **Settings** → **Bluetooth** and make sure it's on.
2. Under **Available devices**, tap your glasses — for example **SNT GS5 MAX_9475** (the last four characters are different on every pair).

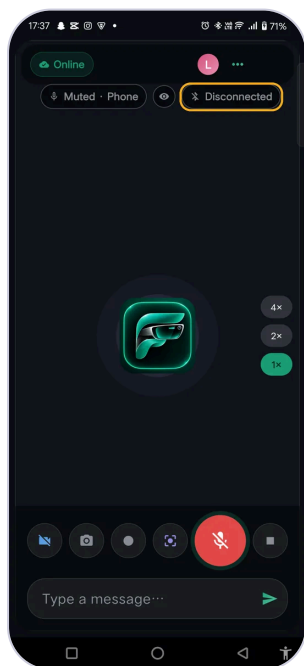

After a few seconds they move up to **Paired devices** and say “*Connected (for calls and media)*”.

Can't see your glasses? Make sure they're on and close to the phone, then pull the list down or tap **Search for devices**. If they're still missing, they're probably connected to another phone — see “Before you start”.

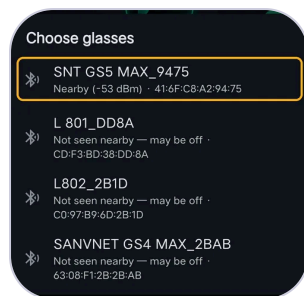

2 Connect them in FarryOn

Open FarryOn. At the top, the glasses chip says **Disconnected**. Tap it.

It changes to *Connecting...* while FarryOn looks for glasses nearby.

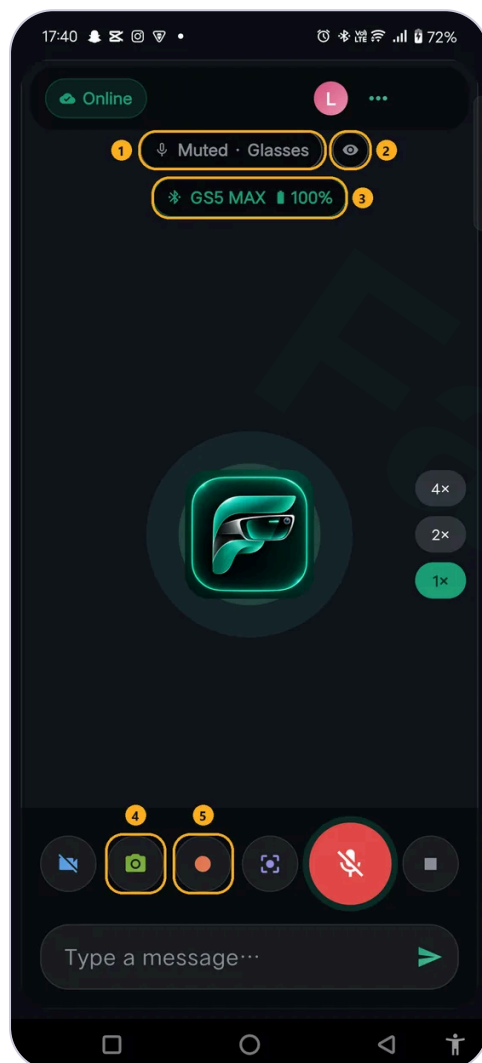

You can also connect from **Settings** → **Glasses**.

If FarryOn finds more than one pair, it asks **“Choose glasses”**. Tap the one marked **Nearby**. Glasses marked *“Not seen nearby — may be off”* are ones this phone knew before.

With only one pair nearby, FarryOn connects straight away and skips this list.

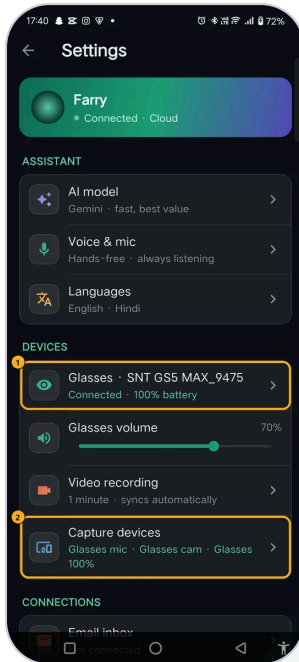

FarryOn remembers your choice and reconnects by itself next time.

Connected. The home screen changes:

- 1 **Microphone** now says *Glasses* — once you've chosen the glasses mic (step 4).
- 2 **Camera** shows an eye: photos come from the glasses.
- 3 **Your glasses** and their battery, e.g. *GS5 MAX 100%*. Tap it to disconnect.
- 4 **Take a photo** through the glasses (step 5).
- 5 **Record a video** on the glasses (step 6).

3 Your glasses in Settings

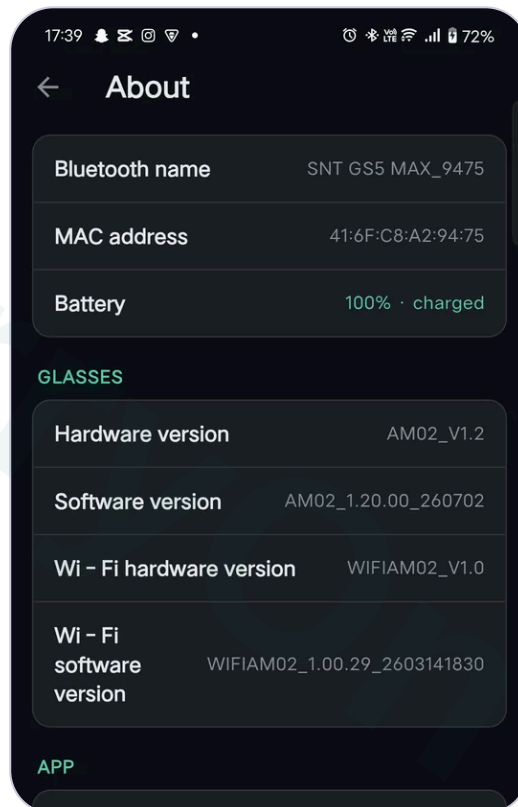

Open the menu  → **Settings**. Under **Devices**:

- **Glasses (1)** — name, connection and battery. Tap for the page below.
- **Glasses volume** — how loud Farry is in your ears.
- **Video recording** — length and copying ([step 6](#)).
- **Capture devices (2)** — which microphone and camera Farry uses ([step 4](#)).

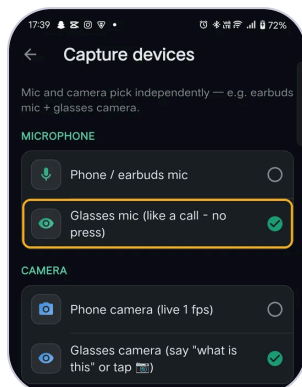

My glasses:

- 1 The glasses, their address, connection and battery.
- 2 **Restart** — switches them off and on. They reconnect in about 20 seconds. Try this first if they misbehave.
- 3 **Restore factory settings** — erases everything on the glasses, including photos and videos not yet copied. Copy your media first; you'll need to pair again afterwards.
- 4 **About** — versions, for when you contact support.
- 5 **Disconnect** — they stay disconnected until you connect again.

4 Talk through the glasses

By default Farry listens through the **phone's** microphone. To use the glasses' microphone instead — much better when the phone is in your pocket:

1. **Settings** → **Capture devices**.
2. Under **Microphone**, tap **Glasses mic (like a call – no press)**.

The glasses work like a phone call: just talk, there's nothing to press. The mic chip on the home screen now says *Listening · Glasses*.

Under **Camera**, **Glasses camera** is chosen for you once glasses are connected.

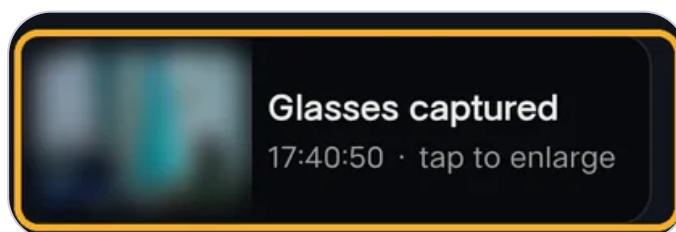

Tip: Press and hold the glasses' assistant button to call Farry without touching the phone.

5 Take a photo with the glasses

Two ways:

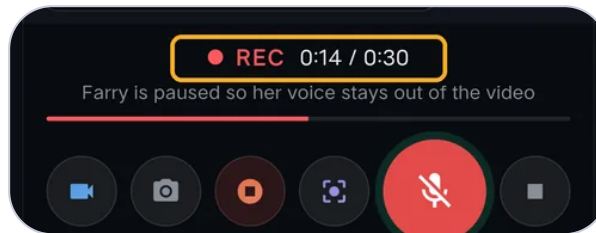

- Just ask: **“What am I looking at?”** or **“Read this for me.”** Farry takes a photo through the glasses and answers.
- Tap the **camera** button (4 on the home screen) to take one yourself.

A card appears with the photo. Tap it to see it full size.

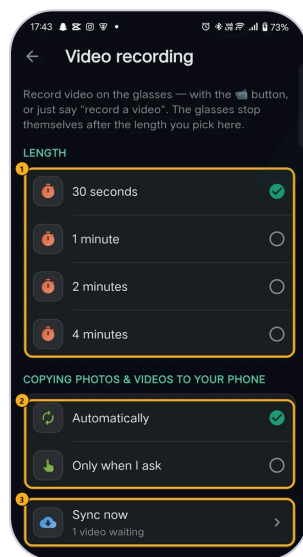

6 Record a video

Tap the **record** button (5 on the home screen), or say **"Record a video."** A bar shows the time. Farry stays quiet while you record, so her voice isn't in your video.

The glasses stop by themselves at the length you've chosen.

Settings → **Video recording** :

- 1 **Length** — 30 seconds to 4 minutes.
- 2 **Copying to your phone** — *Automatically* after each video, or *Only when I ask*. If you film several clips in a row, choose *Only when I ask* and copy them once at the end.
- 3 **Sync now** — copy now. It shows how many videos are waiting on the glasses.

Videos land in your phone's gallery, in the **FarryOn** album (folder DCIM/FarryOn).

The copy goes over a direct Wi-Fi link between the glasses and your phone. Your phone may ask:

"Invitation to connect — From: SNT GS5 MAX..."

Tap Accept. If you tap Decline, the video stays on the glasses until the next try.

- Copying takes a while — a 30-second video is about 40 MB, a 4-minute one a few hundred MB.
- While it copies, the glasses can't take photos or record.
- Keep the glasses **off the charger** and near the phone until it's done.

L802: this model doesn't store video on the glasses, so there is nothing to copy.

? If something goes wrong

What you see	What to do
"No glasses found — make sure they are on and nearby"	Switch the glasses on, bring them close, and check they aren't connected to another phone. Then tap the chip again.
The glasses chip says <i>pair for audio</i>	FarryOn is connected but your phone isn't paired with the glasses yet. Do step 1 .
Farry's voice comes from the phone, not the glasses	Same as above: pair them in your phone's Bluetooth settings (step 1).
Farry doesn't hear you through the glasses	Choose Glasses mic in Capture devices (step 4), and check the mic chip isn't <i>Muted</i> .
"FarryOn needs the Nearby devices permission"	Tap Settings in the message and allow Nearby devices .
A video stays "waiting" and never arrives	Glasses off the charger and near the phone, then Sync now — and Accept the "Invitation to connect".
The glasses keep disconnecting	Try Restart on the My glasses page. Still happening? Send us the versions from About .

Still stuck? Message us on WhatsApp — a real person answers.

SETUP GUIDE · PART 3 OF THE MANUAL

Live translation

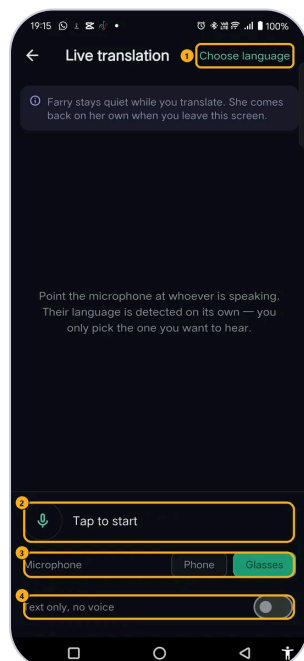

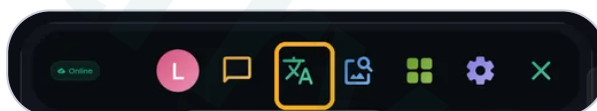

Someone speaks in their language; you read it — and hear it — in yours. You only choose the language you want. FarryOn works out what they're speaking by itself, even when it changes mid-conversation.

Before you start

- Best with **glasses** on (Part 2): the translation plays in your ears and nothing is missed.
- No glasses? The phone works too — earphones help, or switch on **Text only**.
- While you translate, **Farry stays quiet**. She comes back on her own when you leave the translation screen.

1 Open live translation

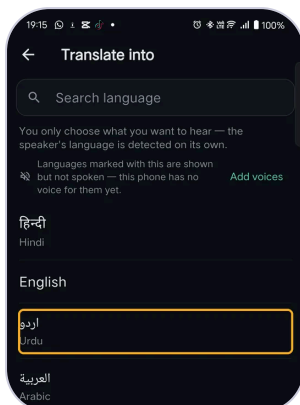

On the home screen, open the menu  and tap the **translate** icon:

The translation screen:

- 1 **Choose language** — the language you want to read and hear.
- 2 **Start / stop** listening.
- 3 **Microphone** — *Glasses* or *Phone*. Glasses is chosen when they're connected.
- 4 **Text only, no voice** — show the translation without speaking it.

2 Choose your language

Tap **Choose language** and pick the language **you** want — in this example, **Urdu**. Use the search box to find it quickly.

You don't choose the other person's language. Whatever they speak — English, Arabic, Hindi, Tagalog... — is detected automatically.

A crossed-out speaker icon next to a language means your phone can show it but has no voice to read it aloud. Tap **Add voices** to install one in your phone's text-to-speech settings.

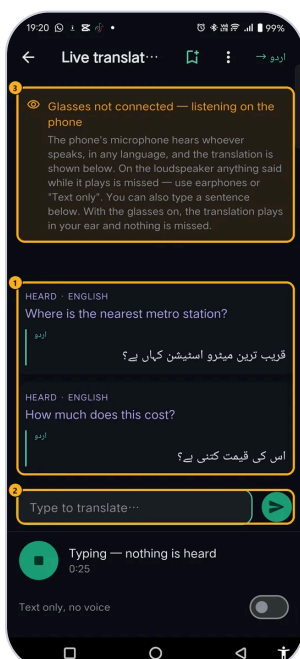

Your choice appears at the top right, e.g. → اردو. Tap it to change it any time.

3 Start translating

Tap the **microphone** button. It turns green and counts the time:

Point the microphone at whoever is speaking — with glasses on, just look at them. Each sentence appears as a card. Tap the button again to stop.

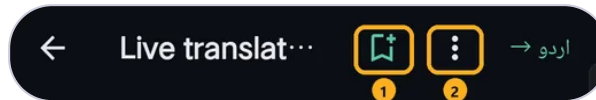

- Each card** shows what was *heard* and the language it was in (top), and the *translation* (below the green line). With voice on, the translation is also read out.
- Type to translate** — when glasses aren't connected, you can type a sentence and tap the arrow. Nothing is heard while you type.
- Without glasses**, this reminder explains the catch: on the loudspeaker, anything said while a translation is playing is missed. Earphones or *Text only* avoid that.

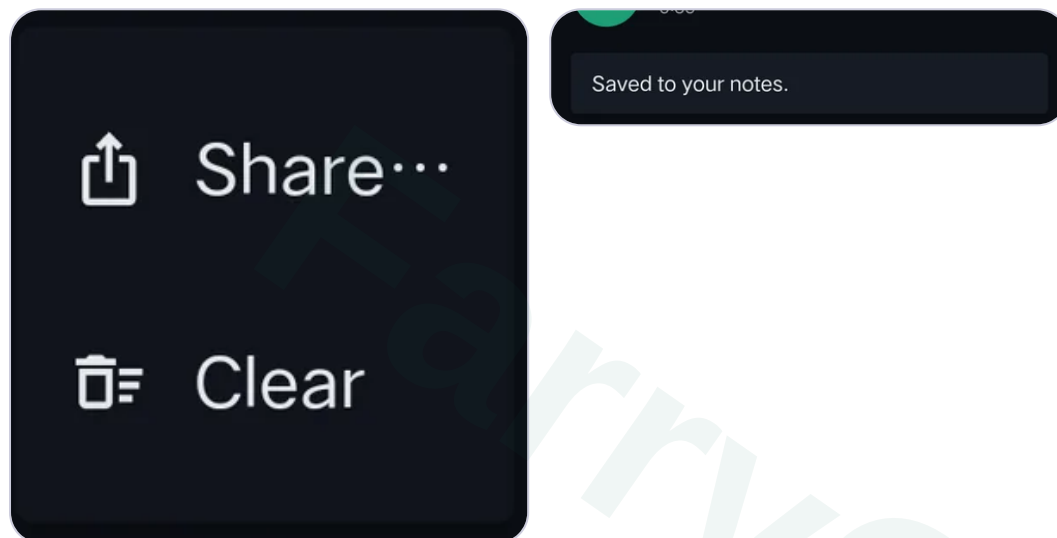

Languages written right-to-left, like Urdu and Arabic, are shown right-to-left.

4 Save, share or clear

Once there's at least one card, two buttons appear at the top:

- 1 **Save** — keeps the whole conversation in your notes. You'll see *"Saved to your notes."*
- 2 **Menu** — **Share...** sends the text to WhatsApp, email or any app; **Clear** empties the screen to start fresh.

Clear asks first. It only empties this screen — anything you saved stays in your notes.

? If something goes wrong

What you see	What to do
Nothing appears while people talk	Check the button is green (<i>Listening...</i>) and the right Microphone is chosen. Bring the phone closer to the speaker.
Some sentences are missing on the phone	On the loudspeaker, speech during a playing translation is missed. Use glasses, earphones, or Text only .
The translation isn't read out	Turn Text only off. If the language has a crossed-out speaker icon, tap Add voices .
"Live translation needs the microphone."	Allow the microphone: phone Settings → Apps → Farry → Permissions .
"Reconnecting..."	Your internet dropped. It continues on its own; what you already have is kept.
Farry doesn't answer	She's quiet while translation is open. Go back to the home screen.

Still stuck? Message us on WhatsApp — a real person answers.

SETUP GUIDE · PART 4 OF THE MANUAL

Connect your email

Connect your inbox once and Farry can tell you what came in today, read emails out, and send replies by voice — always reading the email back to you first. You can connect up to **two** mailboxes, for example personal and work.

Which email works?

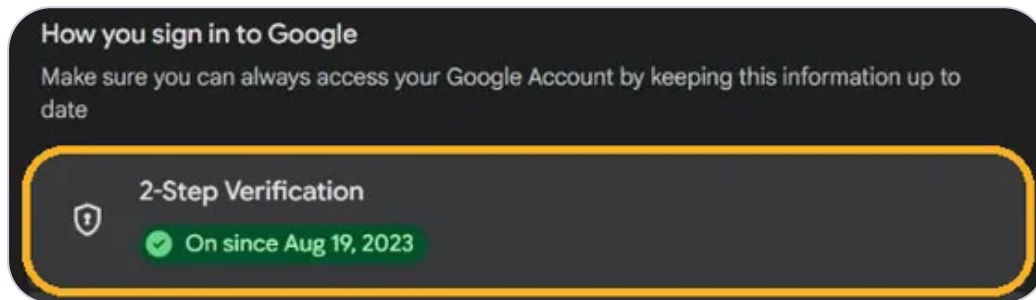

Your email	What you need
Gmail (@gmail.com)	A Google App Password — steps 1 and 2 below.
Yahoo Mail	A Yahoo app password — see step 5 .
Hostinger email	Your normal mailbox password.
Other email on your own domain	The mailbox password and the server names from your email provider (step 5).
Outlook, Hotmail, Live (Microsoft)	Not supported yet. Microsoft no longer allows apps to sign in with a password.

Why not my normal password? Google and Yahoo don't let other apps sign in with your real password. An **app password** is a separate 16-letter code just for FarryOn. It can only be used for email, and you can delete it any time without changing your real password.

1 Turn on 2-Step Verification (Gmail)

Google only offers app passwords when **2-Step Verification** is on.

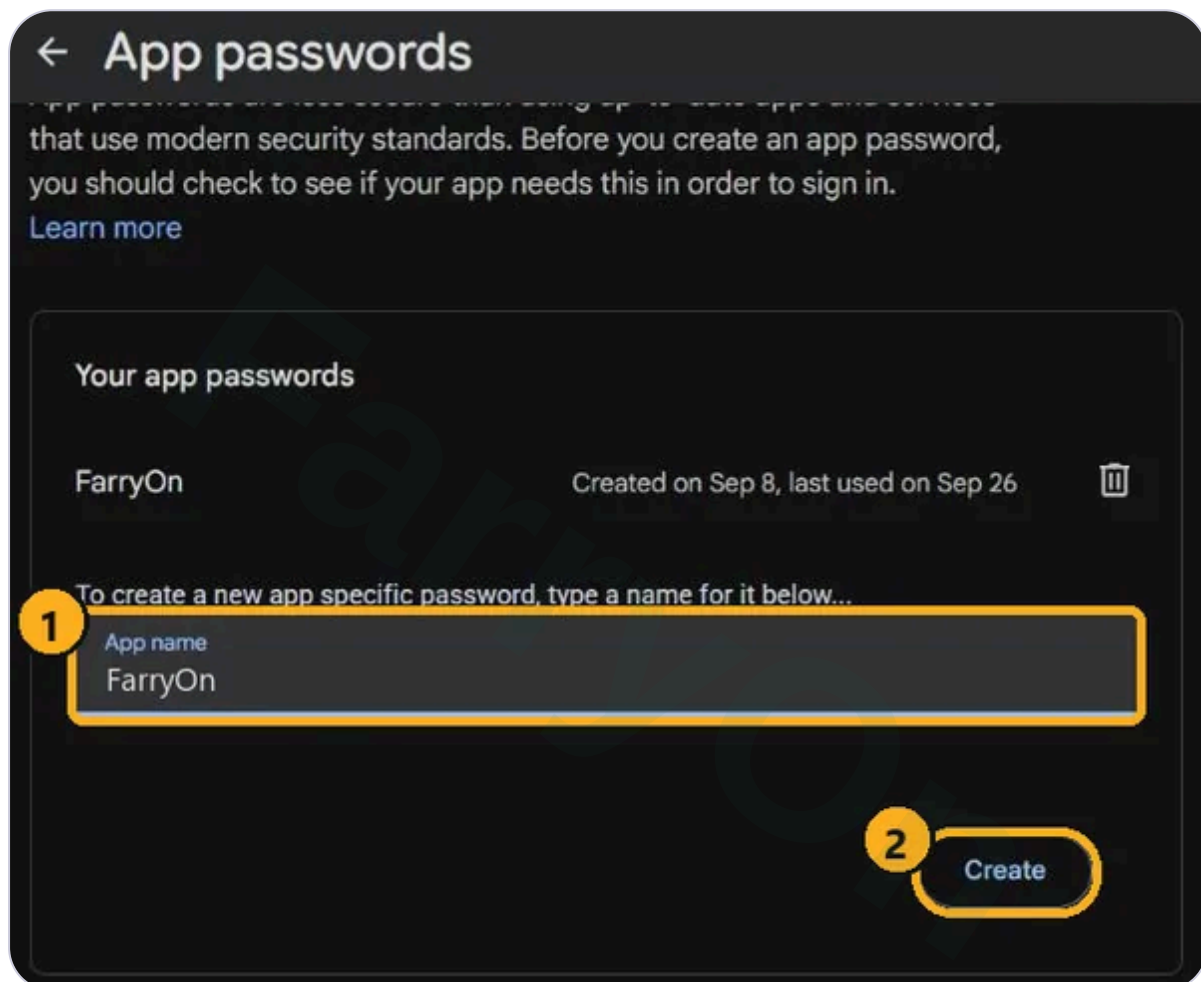

1. Open myaccount.google.com/security and sign in with the Gmail you want to connect.
2. Under **How you sign in to Google**, look at **2-Step Verification**.

If it says **On**, go to step 2. If it's off, tap it, choose **Turn on**, and follow Google's steps (usually a code sent to your phone).

2 Create a Gmail app password

1. Open myaccount.google.com/apppasswords. Google may ask you to confirm it's you again — that's normal.
2. In **App name** (1), type **FarryOn**.
3. Tap **Create** (2).

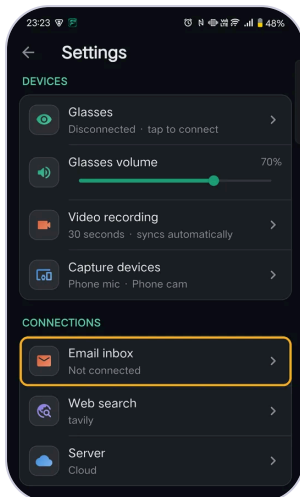

4. Google shows a box titled **"Generated app password"** with a **16-letter code** in four groups, like **abcd efgh ijkl mnop**. **Copy it**.
5. Tap **Done**.

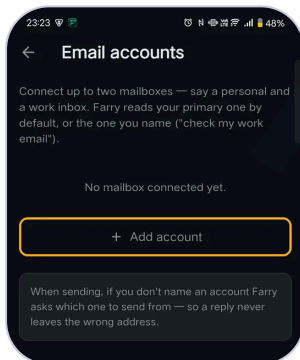

Google shows the code only once. If you lose it, just delete it on the same page and create a new one. Never share it — it opens your email.

Can't find App passwords? 2-Step Verification is off (step 1). On a **work or school** Google account, your administrator may have switched app passwords off — ask them.

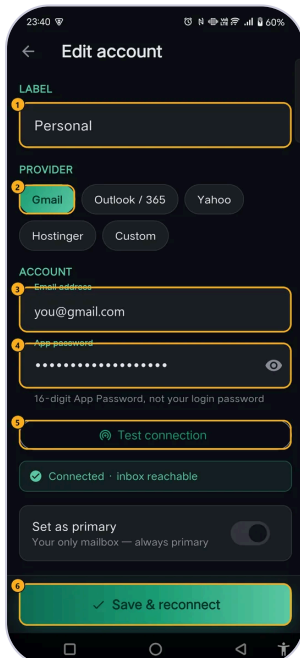

3 Add the account in FarryOn

In FarryOn, open the menu ... → **Settings**. Under **Connections**, tap **Email inbox**.

Tap **+ Add account**.

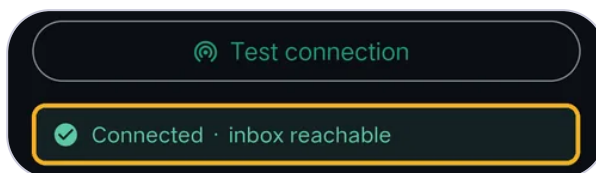

- 1 **Label** — a name you'll say, like *Personal* or *Work*.
- 2 **Provider** — tap **Gmail**.
- 3 **Email address** — your full Gmail address.
- 4 **App password** — paste the 16-letter code from step 2. Spaces don't matter. **Not** your normal Gmail password.
- 5 **Test connection** — checks it works (step 4).
- 6 **Save & reconnect** — saves it.

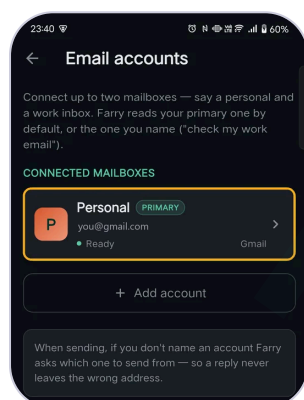

Set as primary: with two mailboxes, the primary one is used when you don't name one.

4 Test and save

Tap **Test connection**. After a few seconds you should see:

Then tap **Save & reconnect**. Your mailbox appears with **Ready**:

That's it. To add a second mailbox, tap **+ Add account** again. To change or remove one, tap its card — **Remove account** is at the bottom.

Test shows a red error?

- Check the email address is complete and correct.
- Paste the **app password**, not your normal password.
- Check the right **Provider** is selected.
- Still failing? Create a new app password (step 2) and try again.

5 Yahoo, Hostinger and other email

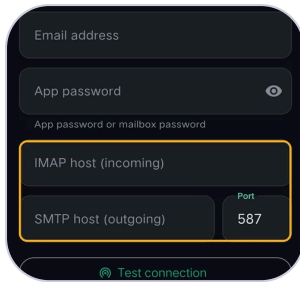

Yahoo Mail

1. Sign in at login.yahoo.com/account/security.
2. Choose **Generate app password** (or *Generate and manage app passwords*).
3. Type **FarryOn** as the name and tap **Generate password**. Copy the code.
4. In FarryOn choose provider **Yahoo**, enter your Yahoo address and paste the code.

Hostinger email

Choose provider **Hostinger**, then enter your full email address and your normal mailbox password. Forgot it? Reset it in Hostinger: **hPanel** → **Emails** → **your domain** → **the mailbox** → **Change password**.

Any other email (your own domain, cPanel, Zoho...)

Choose provider **Custom**. Two more boxes appear. Your email provider's help pages list these values:

Box	What to enter
IMAP host (incoming)	e.g. imap.yourprovider.com or mail.yourdomain.com
SMTP host (outgoing)	e.g. smtp.yourprovider.com
Port	587 (most providers) or 465
App password	Your mailbox password, or an app password if your provider uses them

6 Use email with Farry

Just ask, in your own words. For example:

Say	Farry does
"What's in my inbox today?"	A short summary of today's email.
"Read my latest email from Ahmed."	Finds it and reads it out.
"Any emails about my order this week?"	Searches by keyword and time.
"Email Sara that I'll be ten minutes late."	Finds Sara's address, writes the email and reads it back .
"Check my work email."	Uses the mailbox labelled <i>Work</i> .

Nothing is sent without your yes. Before sending, Farry reads out who it's going to and what it says, and asks you to confirm. Say **"yes, send it"** — or tell her what to change. With two mailboxes, if you don't say which one, she asks.

If something goes wrong

What you see	What to do
No "App passwords" page on Google	Turn on 2-Step Verification (step 1). Work/school accounts: ask your admin.
Test connection fails	Use the app password, not your normal password; check the address and provider (step 4).
It worked before, now it doesn't	Changing your Google password deletes all app passwords. Create a new one and paste it in.
The card says "Needs app password"	Tap the card, paste the app password, test, save.
Outlook / Hotmail won't connect	Microsoft accounts aren't supported yet.
Farry says email isn't connected	Settings → Email inbox should show a card with <i>Ready</i> .

Still stuck? Message us on WhatsApp — a real person answers.

SETUP GUIDE · PART 5 OF THE MANUAL

Messages and calls

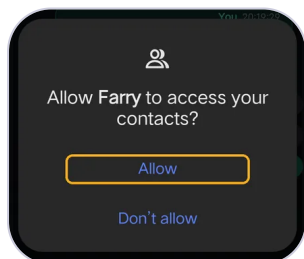

Ask Farry to WhatsApp someone, text them or call them — by name. Farry finds the person in your phone's contacts, reads the message back to you, and opens WhatsApp or Messages with it already typed. **You** tap Send.

How it works

- Messages go from **your own** WhatsApp and SIM — Farry doesn't send anything from a FarryOn account.
- Your **contacts stay on your phone**. Farry only ever sees a hidden number like **+971 ... ••57**, never the real one.
- **Nothing goes out without your yes**. Farry always tells you who and what first, then waits.

Telegram works differently — messages, photos and videos go straight from your own account. See [Part 8: Telegram](#).

1 Let Farry see your contacts

The first time you message someone by name, your phone asks **"Allow Farry to access your contacts?"** Tap **Allow**.

This lets Farry find people by the names saved in your phone. The search happens **on the phone** — your contact list isn't uploaded.

Said "Don't allow"? Farry will ask you for the number instead. To change it: phone **Settings** → **Apps** → **Farry** → **Permissions** → **Contacts** → Allow.

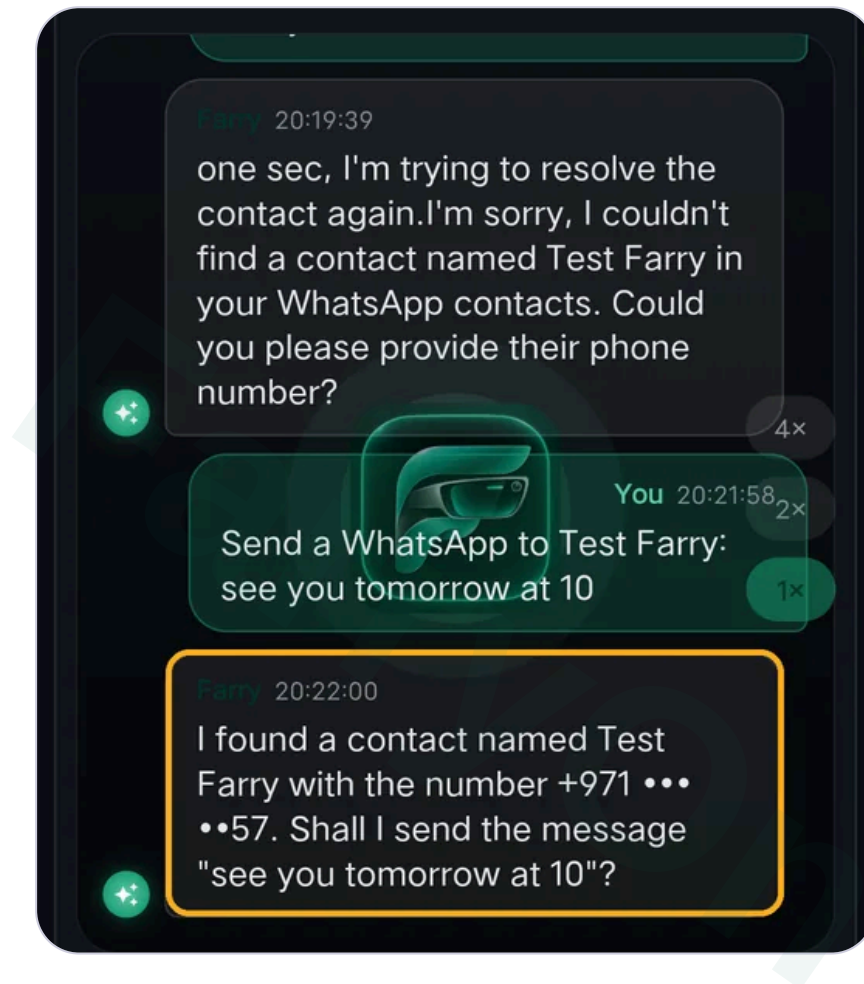

Tip: if Farry says she couldn't find the contact right after you tapped Allow, just ask again — the first lookup can time out while the question is on screen.

2 Send a WhatsApp message

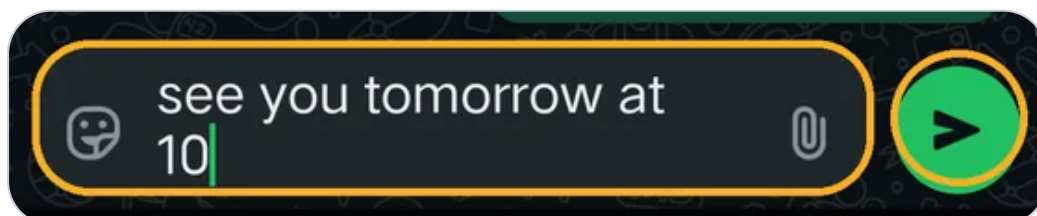

Say it — or type it — the way you'd say it to a person:

"Send a WhatsApp to Sara: see you tomorrow at 10."

Farry finds Sara and reads it back, with her number hidden:

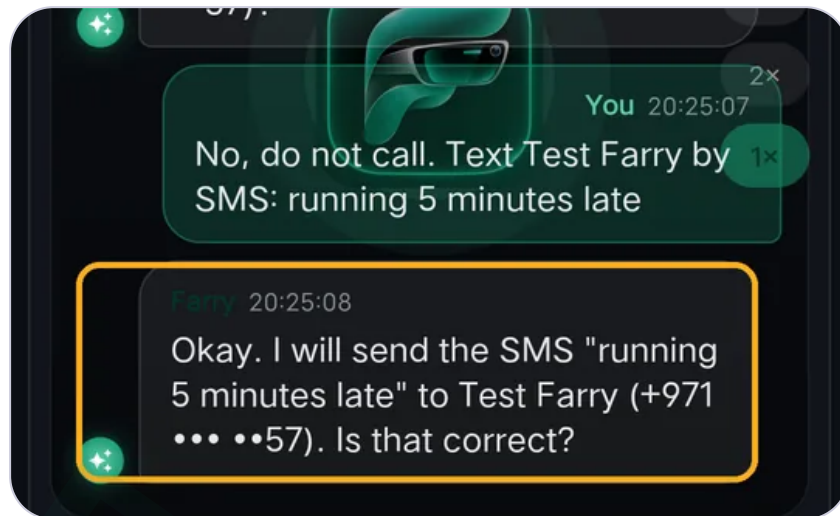

Say **"yes"**. WhatsApp opens on Sara's chat with your message already typed. **Tap the green Send button** to send it:

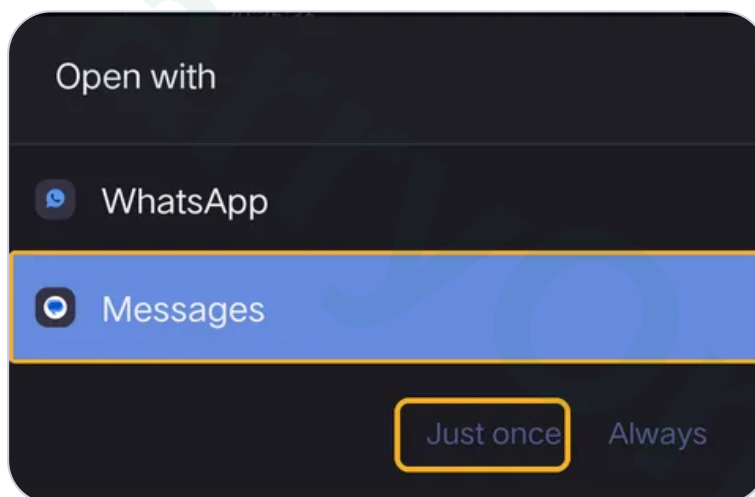

Want to change it? Say *"no"* or *"change it to ..."* before you say yes. In WhatsApp you can still edit the text before tapping Send.

3 Send an SMS

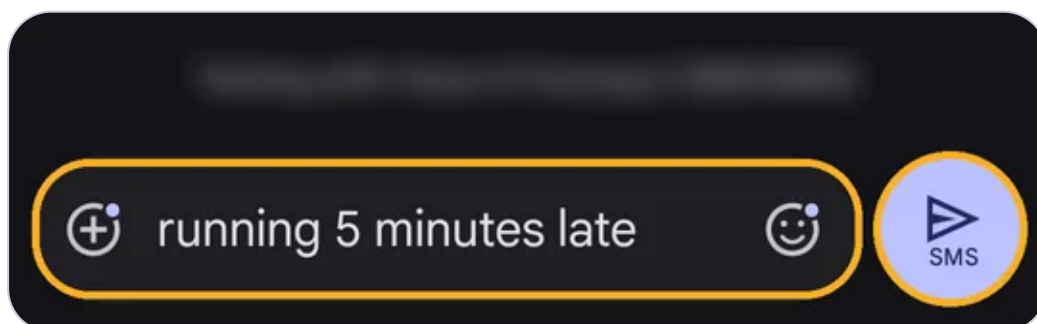

"Text Sara by SMS: running 5 minutes late."

Say **"yes"**. Your phone may ask which app to use:

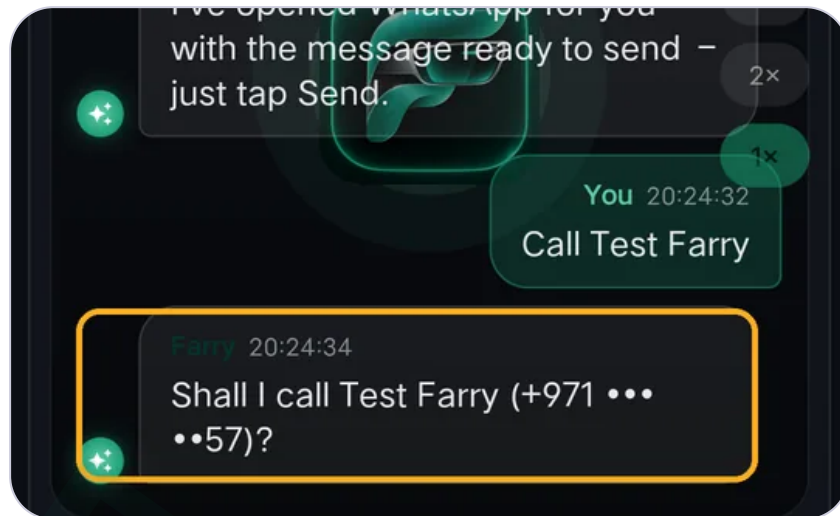

Choose **Messages**, then **Just once** (or **Always** so it won't ask again). Your Messages app opens with the text typed in — tap **Send**:

4 Make a phone call

"Call Sara." Farry checks first:

Say **"yes"** and the call starts. Say **"no"** and nothing happens.

First call: your phone may ask **"Allow Farry to make and manage phone calls?"** Allow it to let Farry dial for you. If you don't, Farry opens the phone's dialer with the number filled in, and you tap the call button yourself.

5 Good to know

Situation	What Farry does
Two contacts with the same name	Asks which one — e.g. <i>"Sara Home or Sara Office?"</i>
Name isn't in your contacts	Asks for the number. You can also say <i>"Save Sara's number as +971 ..."</i> and use the name next time.
Contact has no phone number	Tells you, instead of guessing.
You change your mind	Say <i>"no"</i> or <i>"cancel"</i> before saying yes — nothing is opened or sent.
With glasses on	Ask by voice with the phone in your pocket; take the phone out only to tap Send.

? If something goes wrong

What you see	What to do
"I couldn't find a contact named ..."	Check the name matches your phone's contacts. Allow Contacts (step 1). Or give the number.
WhatsApp says the number isn't on WhatsApp	That person doesn't use WhatsApp on that number — send an SMS instead (step 3).
WhatsApp opened but nothing was sent	That's expected — tap the green Send button. Farry never sends on WhatsApp by herself.
The wrong app opens for SMS	Pick Messages in the "Open with" list, then Always .
A call didn't start	Allow the phone-calls permission, or tap Call in the dialer that opened.

SETUP GUIDE · PART 6 OF THE MANUAL

Notes, reminders and past chats

Tell Farry to remember something or to remind you, in your own words. She saves it for you — and you can ask about it later, or see everything in **Your stuff**.

1 Save a note or a reminder

Just say it:

- 1 **A note** — start with *“remember...”*:
“Remember that my car is parked on level 3, bay B12.”
- 2 **A reminder** — say *“remind me...”* with a time:
“Remind me tomorrow at 9am to call the dentist.”

Farry confirms each one. Other ways to say it work too — *“make a note: buy milk and eggs”*, and *“remind me in 20 minutes to take the tea out”*.

Reminders arrive as notifications on your phone at the time you asked — even when FarryOn is closed. They need the **Notifications** permission (Part 1, step 6).

2 Ask Farry about them

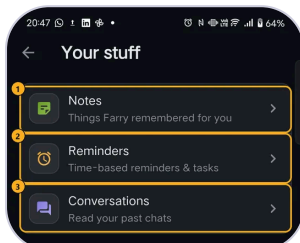

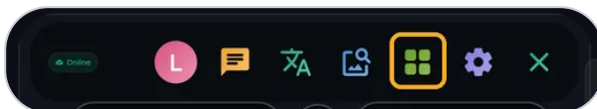

The easiest way to find a note is to ask:

- *“Where did I park my car?”*
- *“What are my reminders?”*
- *“What did I note about the plumber?”*
- *“Cancel the dentist reminder.”*

3 Open Your stuff

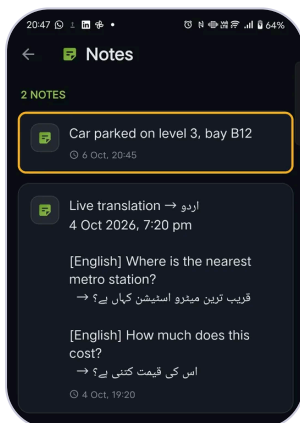

On the home screen open the menu  and tap the **grid** icon:

- 1 **Notes** — everything Farry remembered for you, and translations you saved.
- 2 **Reminders** — upcoming reminders and tasks, grouped by day.
- 3 **Conversations** — your past chats with Farry.

The same three are also in **Settings** → **Your stuff**.

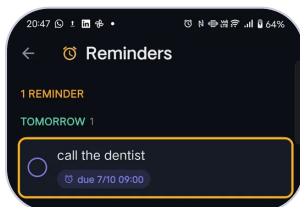

4 Notes

Newest first, with the date and time each was saved. Translations you saved in Live translation (Part 3) appear here too.

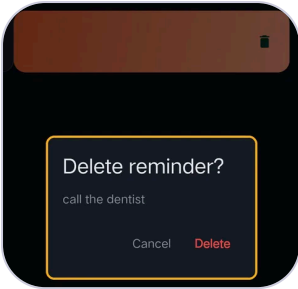

To delete a note, swipe it to the left and confirm.

5 Reminders

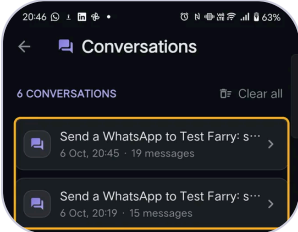

Grouped as **Overdue**, **Today**, **Tomorrow**, **This week** and **Later**, with the due date and time.

- **Done?** Tap the circle to tick it off. Tap again to undo.
- **Not needed?** Swipe it left to delete.

Deleting always asks first. Tap **Delete** to remove it — its notification is cancelled too — or **Cancel** to keep it.

6 Past conversations

Each session you have with Farry is saved here when it ends, with its date and how many messages it had. Tap one to read it again.

- Swipe a conversation left to delete it.
- **Clear all** deletes every saved conversation (it asks first).

Deleting a conversation doesn't delete notes or reminders made during it.

? If something goes wrong

What you see	What to do
A reminder didn't ring	Allow Notifications for Farry. On some phones also set Farry's battery use to <i>Unrestricted</i> (Settings → Apps → Farry → Battery).
The reminder is at the wrong time	Say the time clearly, with am/pm or “in the evening”. Check it in Reminders and ask Farry to change it.
“No notes yet” but I asked Farry to remember	Use the word “remember” or “make a note”, and wait for Farry to confirm. Pull down to refresh.
A past chat is missing	Chats are saved when a session ends. Your current session appears after it ends.

Still stuck? Message us on WhatsApp — a real person answers.

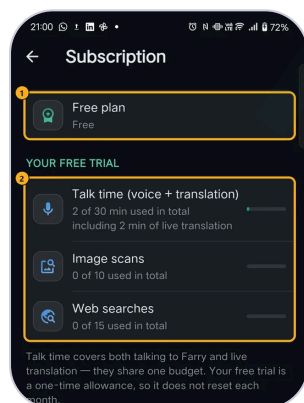

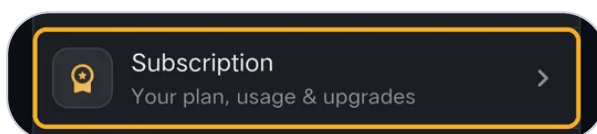

SETUP GUIDE · PART 7 OF THE MANUAL

Your plan

Every account starts with a free trial. When you need more, pick a plan in the app and pay securely by card. Here's how to see what you've used and how to upgrade.

1 See your plan and usage

Open the menu  → **Settings** . Under **Account**, tap **Subscription** :

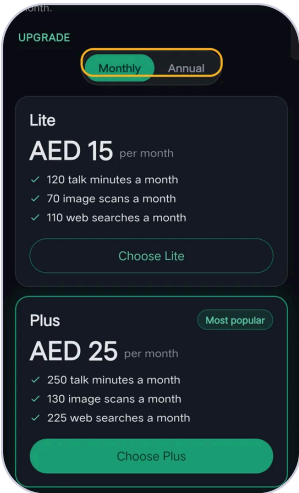

1 Your plan — here the *Free plan*.

2 What you've used, against your allowance:

- **Talk time** — minutes talking to Farry *and* using live translation. They share one budget.
- **Image scans** — each time Farry looks at a photo ("what is this?").
- **Web searches** — each time Farry searches the internet for you.

Free trial: 30 minutes of talk time, plus some scans and searches. It's a one-time allowance — it doesn't reset each month. Paid plans reset every month.

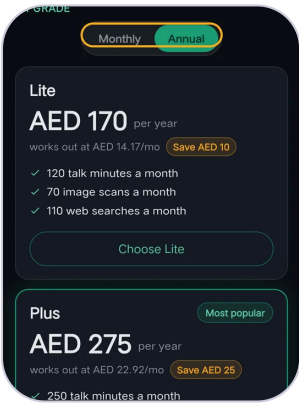

2 Compare the plans

Scroll down to **Upgrade**. There are three plans:

Plan	Each month
Lite	120 talk minutes · 70 image scans · 110 web searches
Plus (<i>most popular</i>)	250 talk minutes · 130 image scans · 225 web searches
Pro	400 talk minutes · 240 image scans · 400 web searches

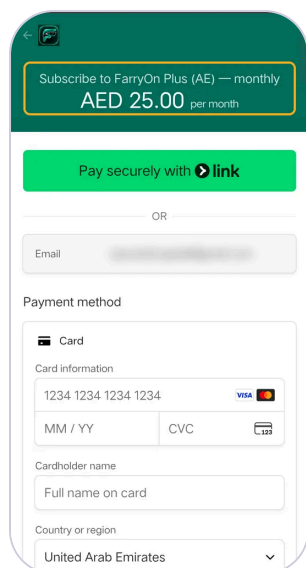

Prices are shown in your local currency. The screenshots show UAE prices (AED).

Tap **Annual** to pay for a year at once. Each plan shows what it works out to per month and how much you save.

Where a plan is a **one-time payment** (for example in India), it says *“One-time payment · no auto-renew”* — it covers the period shown and doesn't renew by itself.

3 Upgrade

1. Tap **Choose Lite** , **Choose Plus** or **Choose Pro** .
2. A secure payment page opens in your browser, run by **Stripe** (address starts with `checkout.stripe.com`). Check the plan and price at the top.
3. Enter your card details — or use Link, Google Pay or Apple Pay if offered — and confirm.
4. Go back to FarryOn. Your new plan shows on the Subscription page within a minute.

Safe payment: your card details go to Stripe, not to FarryOn — we never see or store your card number.

Page says “Something went wrong”? Pull the page down to reload it, or go back and tap Choose again.

4 When you run out

- When your talk time is used up, Farry tells you, and you can upgrade from the Subscription page.
- On a paid plan, your allowance refills at the start of each billing month.
- Notes, reminders and past chats are never deleted because of your plan.

Cancel your plan

Settings → **Subscription** → **Cancel subscription** . Your plan keeps working until the end of the period you've paid for, and you aren't charged again. Changed your mind before then? The same place shows **Keep my subscription** , and it renews as before.

To move to a different plan, message us on WhatsApp.

If something goes wrong

What you see	What to do
Plans say <i>"Coming soon"</i>	Payments aren't switched on in your region yet. Your free trial keeps working.
I paid but still see the Free plan	Wait a minute and reopen Subscription. Still Free? Message us with the email on your receipt.
The payment page won't load	Pull down to reload, check your internet, or tap Choose again.
Card declined	Try another card, or ask your bank to allow online payments.

Still stuck? Message us on WhatsApp — a real person answers.

SETUP GUIDE · PART 8 OF THE MANUAL

Telegram

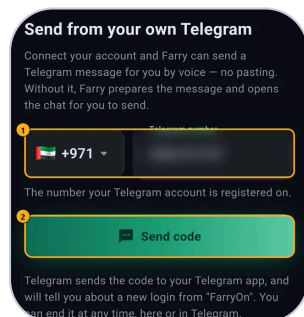

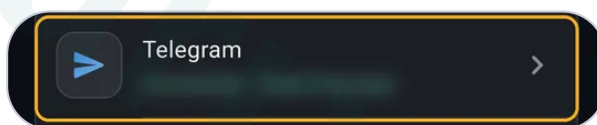

Connect your own Telegram account once, and Farry can send messages, photos and videos from your glasses to anyone — or any group — by voice. Unlike WhatsApp, Telegram messages go out **directly**, so Farry always reads them back and waits for your yes.

Before you start

- The **Telegram app** installed on your phone and signed in — the login code arrives there.
- For photos and videos: your **glasses connected** (Part 2).

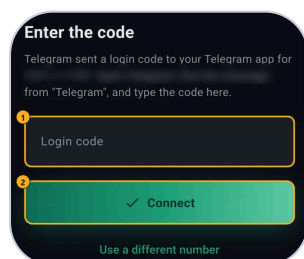

1 Connect your Telegram account

Open the menu  → **Settings**. Under **Connections**, tap **Telegram**:

- 1 Pick your **country** (it starts on yours) and type the **number your Telegram account uses**.
- 2 Tap **Send code**.

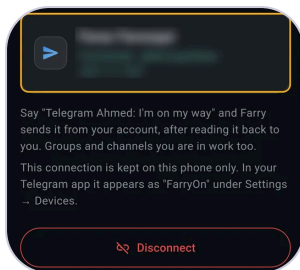

Telegram sends a login code — not by SMS, but as a message inside your **Telegram app**, from "Telegram".

- 1 Open Telegram, find the message from **Telegram**, and type the code here.
- 2 Tap **Connect**.

If your Telegram has a **two-step password**, FarryOn asks for it next.

Never share this code. Type it only into FarryOn yourself. Telegram will also show you a "new login from FarryOn" alert — that's expected.

Done — the card shows your name and **Connected**.

- The connection is kept **on this phone only**.
- In your Telegram app it appears as **"FarryOn"** under Settings → Devices.

2 Send a message

Say who and what, for example:

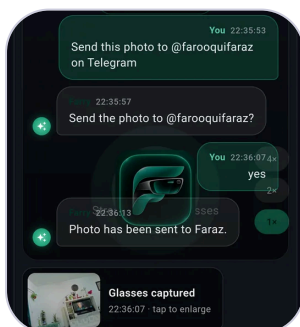

"Telegram Ahmed: I'm on my way."

1. Farry reads it back — *who* (name and a part-hidden number) and *what* — and asks.
2. Say **"yes"** (or *haan*, *send it*, *ok*).
3. Wait until Farry says it was **sent**.

Changed your mind? Say *"no"*, *"wait"* or *"don't send"* — nothing goes. To change the text, just say the new text; Farry asks again.

Groups and channels you're in work too: *"Telegram the family group: dinner at 8."*

3 Send a photo from your glasses

- In one go: **"Take a photo and send it to Ahmed on Telegram."**
- Or after taking one (camera button or "take a photo"): **"Send this photo to Ahmed."**

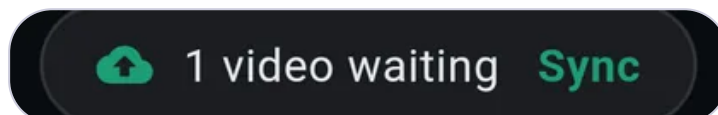

The photo you see on the screen is the one that goes. Say a caption if you want one (*"...with the caption: the view from here"*); otherwise it goes without.

Farry asks *"Send the photo to Ahmed?"* — say **yes**.

Older than 10 minutes? Farry will ask you to take a new one.

4 Send a video from your glasses

1. **Record:** say *"Record a video"* or tap the record button (30 seconds by default — [Part 2, step 6](#)).
2. **Copy it to the phone:** it copies by itself if *Automatically* is on in Settings → Video recording; otherwise tap **Sync** on the chip:

3. **Send:** *"Send that video to Ahmed on Telegram"* → Farry asks → **"yes"**.

- It's always your **newest** video that goes — you can't pick an older one yet.
- A 30-second glasses video is about 40 MB — on mobile data it takes about a minute. Wait for **"sent"**; don't ask again while it's sending.
- If the video hasn't reached the phone yet, Farry says so — sync it, then ask again.

5 Video sync: what it needs

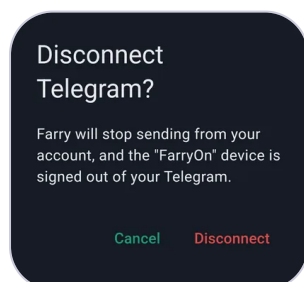

The glasses copy videos to your phone over a **direct Wi-Fi link** between the two. It doesn't need the internet — it works on mobile data too — but:

Needed	Why
Phone Wi-Fi switched on	It doesn't have to be connected to a network — but with Wi-Fi off, sync never starts.
Glasses off the charger	On the charger the glasses' Wi-Fi sleeps and sync can fail.
Glasses connected by Bluetooth	The phone asks the glasses for the file over Bluetooth first.
FarryOn open until it's done	Sync stops if the app is closed.

6 Good to know

- **Nothing goes without your yes.** If the app closes before a message is sent, ask again — Farry never sends on an old yes.
- Photos and videos need Telegram **connected** (step 1). Without it, Farry can only open the Telegram chat for you to paste the text yourself.
- Biggest file: **64 MB** — about 45 seconds of glasses video. Longer recordings can't be sent yet.
- Photos and videos go by **Telegram only** for now — not WhatsApp or SMS.

Disconnect

Settings → Telegram → **Disconnect**. Farry stops sending from your account, and the “FarryOn” device is signed out of your Telegram. You can also end it from Telegram: Settings → Devices → FarryOn.

If something goes wrong

What you see	What to do
No login code arrives	Look inside the Telegram app (not SMS), in the chat from "Telegram". Check the number and country.
"Telegram ended this connection"	It was signed out from Telegram's Devices list. Connect again (step 1).
Video stuck "waiting" or sync at 0%	Turn the phone's Wi-Fi on, take the glasses off the charger, keep FarryOn open, tap Sync.
"The video isn't on the phone yet"	Let the sync finish, then ask again.
Video too big	Record 45 seconds or less (Settings → Video recording → 30 seconds).
Farry can't find the person	Use their Telegram @username, or the name saved in your phone's contacts.

Still stuck? Message us on WhatsApp — a real person answers.

Finder, camera and chat

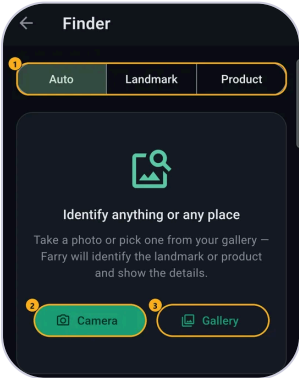

The tools on the home screen and in the top menu: identify anything in a photo, let Farry look through the camera, and read your conversation as text.

The top menu, in short

Tap  on the home screen. From left to right (see [Part 1, step 7](#)):

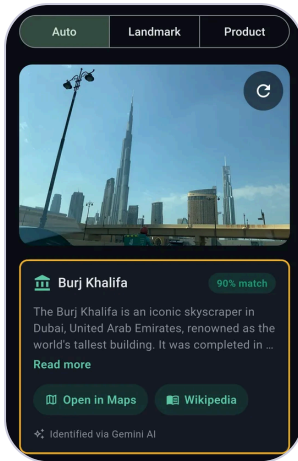

Icon	What it opens
Account (your initial)	Settings — Part 10 .
Chat	Shows or hides the written conversation — step 4 .
Translate	Live translation — Part 3 .
Finder	Identify a landmark or product in a photo — step 1 .
Grid	Your stuff: notes, reminders, chats — Part 6 .
Gear	Settings — Part 10 .
×	Closes the menu.

1 Finder: identify anything in a photo

Open the menu  and tap the **Finder** icon.

- 1 **What to look for** — *Auto* (Farry decides), *Landmark* (buildings, places) or *Product* (things you could buy).
- 2 **Camera** — take a new photo.
- 3 **Gallery** — pick a photo you already have.

After a few seconds of *Identifying...* you get a card:

- **What it is**, and how sure Farry is (e.g. *90% match*).
- A short description — tap **Read more**.
- For places: **Open in Maps** and **Wikipedia**.
- For products: where to buy it and similar images.

Tap ↺ on the photo to try another one.

"Nothing recognized"? Try a clear photo of a single subject, or tap **Open Lens** to search the photo with Google Lens.

2 Ask what the camera sees

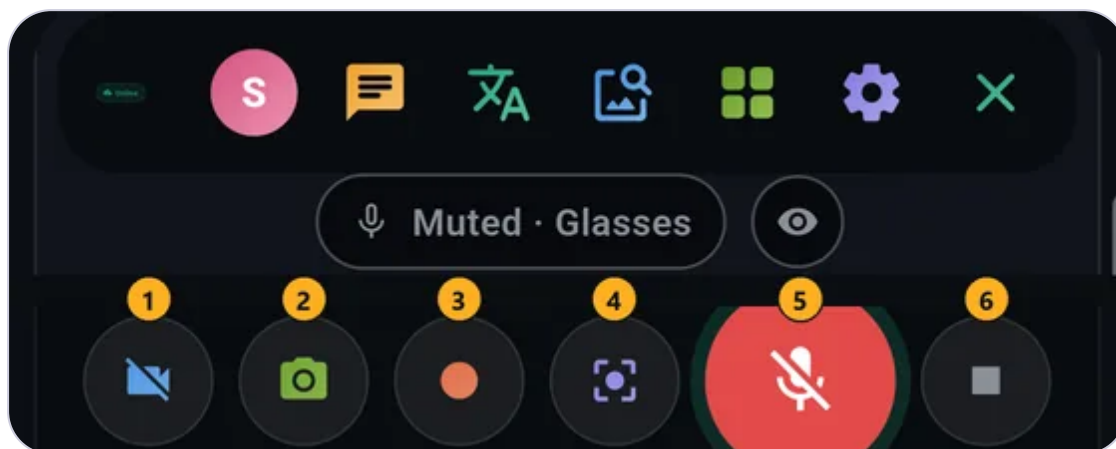

Point the camera — or look, with glasses on — and either:

- tap the **Identify** button (the square with a dot), or
- just ask: *"What am I looking at?"*, *"What does this sign say?"*

A card slides up with what Farry sees, the details she noticed, and tags. Swipe it down to close.

3 The buttons with glasses connected

When glasses are connected, the bottom row changes. Here it is with the top menu open:

- 1 **Phone camera** on/off — to show Farry something through the phone instead.
- 2 **Glasses photo** — take a photo through the glasses.
- 3 **Record** a video on the glasses (Part 2, step 6).
- 4 **Identify** what the glasses see (step 2).
- 5 **Microphone** — red is muted, green is listening.
- 6 **Interrupt** — stops Farry mid-answer.

The **eye** chip next to the microphone chip shows the glasses are the camera Farry uses. Without glasses, the phone camera, front/back switch and zoom (1×, 2×, 4×) appear instead — see Part 1, step 7.

4 See the conversation as text

Tap the **Chat** icon in the top menu to show or hide the written conversation — what you said and what Farry answered. It's handy in a noisy place, or to copy something Farry said.

- Typing in *Type a message...* works whether the chat is shown or not.
- Photos you took appear in the chat as cards — tap one to enlarge it.
- Every session is saved when it ends; read old ones in [Your stuff](#) → [Conversations](#).

"Session paused"? After a while with nothing said, Farry pauses to save your talk time. Tap **Start session** and carry on where you left off.

If something goes wrong

What you see	What to do
Finder says "Something went wrong"	Check your internet and try again.
Identify says the glasses aren't connected	Tap the glasses chip to reconnect (Part 2), or turn on the phone camera.
The camera button is grey	Allow the camera: phone Settings → Apps → Farry → Permissions → Camera.
Image scans used up	Each Finder or Identify uses one scan — see Part 7: Your plan .

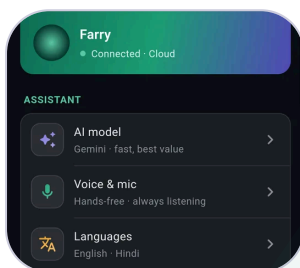

Still stuck? Message us on WhatsApp — a real person answers.

SETUP GUIDE · PART 10 OF THE MANUAL

All settings

What every setting does. Open it from the menu  → **Settings** (the gear), or tap your initial. Most pages have a **Save & reconnect** button at the bottom — the change takes effect when you tap it.

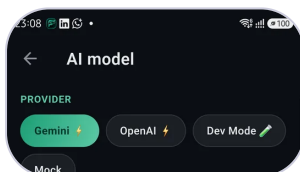

1 Assistant

The card at the top says whether Farry is **Connected** and to which server.

Under **Assistant**: AI model, Voice & mic, and Languages.

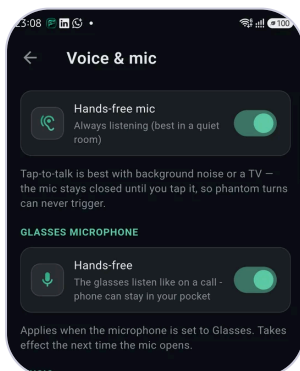

AI model

- **Gemini** — fast, smooth voice and vision, best value. **Recommended.**
- **OpenAI** — also fast; a premium alternative.

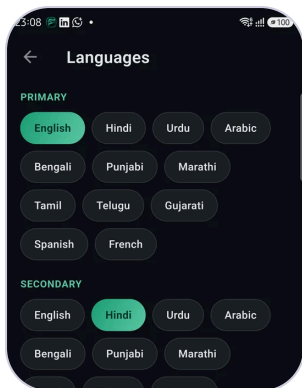

The screenshot is from an admin account; yours shows only Gemini and OpenAI.

Voice & mic

- **Hands-free mic** — on: Farry is always listening (best in a quiet room). Off: *tap-to-talk* — the mic stays closed until you tap it, so a TV or background noise can't trigger her.
- **Glasses microphone · Hands-free** — the glasses listen like a phone call; the phone can stay in your pocket. Applies when the microphone is set to Glasses.
- **Lower music while talking** — asks your music app to turn down while you speak, like a navigation prompt does.

Languages

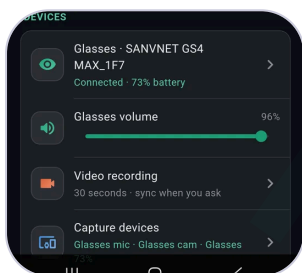

Farry answers in whatever language you speak. These two only decide the tricky cases — mixed or very short sentences:

- **Primary** — used first, and for reminders and when Farry speaks on her own.
- **Secondary** — your other everyday language.

Applies from the next session.

2 Devices

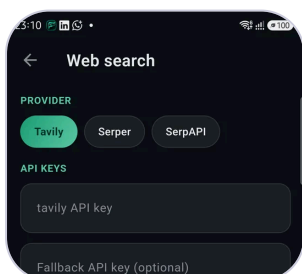

- **Glasses** — connect, restart, reset, versions (Part 2, step 3).
- **Glasses volume** — how loud Farry is in your ears. Slide it.
- **Video recording** — length and copying to the phone (Part 2, step 6).
- **Capture devices** — which microphone and camera Farry uses (Part 2, step 4).

3 Connections

- **Email inbox** — Part 4.
- **Telegram** — Part 8.

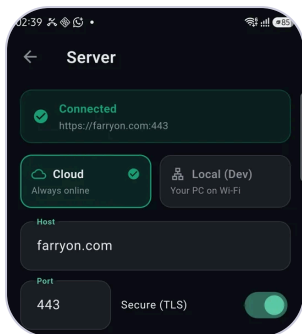

Web search

You don't need to set anything here. Web search works out of the box — just ask Farry (*"What's the weather in Dubai tomorrow?"*).

Only if you have your **own** account with a search provider (Tavily, Serper or SerpAPI) can you choose it and paste your key; FarryOn then uses your key instead. Leave the boxes empty otherwise.

Server

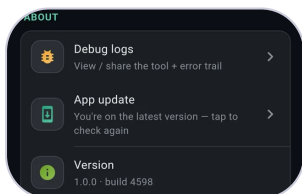

Keep it on **Cloud** — *Connected · https://farryon.com:443* with **Secure (TLS)** on.

Don't change this unless FarryOn support asks you to. *Local (Dev)* is for developers running their own server; on it the app can't reach your account.

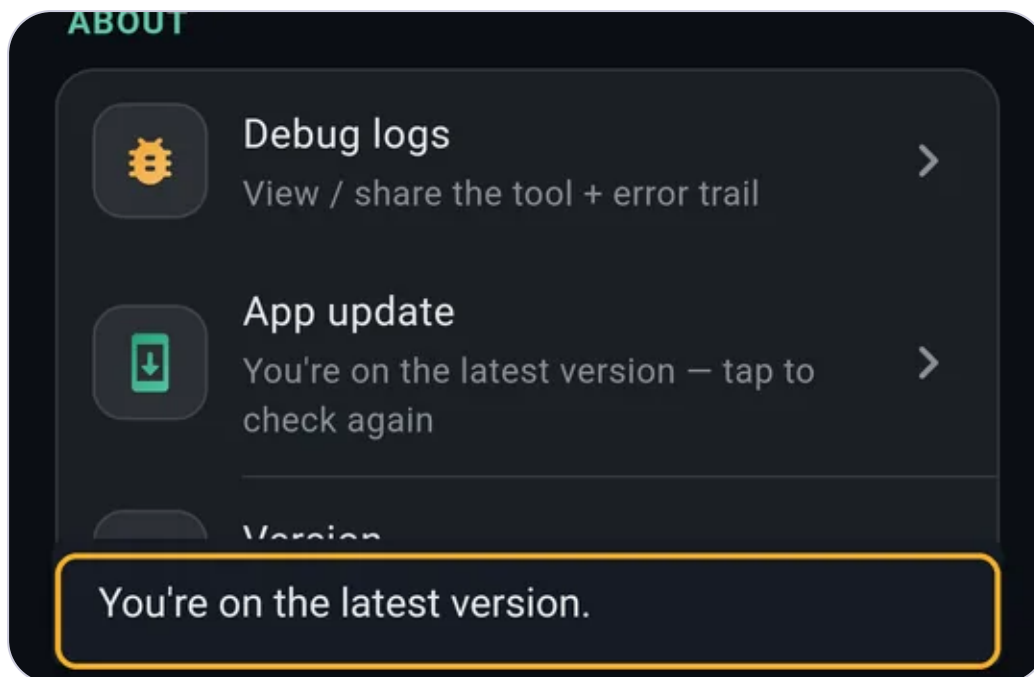

4 Your stuff and account

- **Notes, Reminders, Conversations** — [Part 6](#).
- **Your name and email** — the account you're signed in with.
- **Subscription** — [Part 7](#).
- **Sign out** — signs out on this phone. Your notes, reminders and plan stay with your account.
- **Privacy** — keep or stop your conversation history, delete it, or delete your account — [Part 11](#).

5 App update, debug logs, version

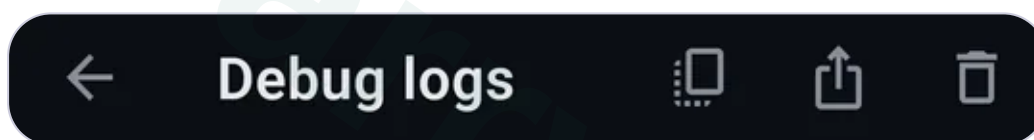

- **App update** — tap to check for a newer version. When one is out, FarryOn also tells you when it opens; tap **Update**, and install it the same way as the first time ([Part 1, step 2](#)).
- **Version** — the number to tell support, e.g. *1.0.0 · build 4598*.
- **Debug logs** — a record of what the app did, for support.
- **Show tips again** — replays the quick tours of the home screen, Translation, Finder, Telegram and email setup.

Sending debug logs to support

If support asks for logs, open **Debug logs** and use the buttons at the top:

Copy · **Share** (send it to us on WhatsApp or email) · **Delete** (clear the log).

Privacy: the log includes what you said to Farry. Only share it with FarryOn support.

? If something goes wrong

What you see	What to do
Top card says not connected	Check your internet. Settings → Server should be <i>Cloud</i> .
A change didn't apply	Tap Save & reconnect at the bottom of that page.
Farry answers strangely or not at all	Settings → AI model → choose Gemini , then Save & reconnect.
Farry hears the TV	Voice & mic → turn <i>Hands-free mic</i> off (tap-to-talk).

Still stuck? Message us on WhatsApp — a real person answers.

FarryOn

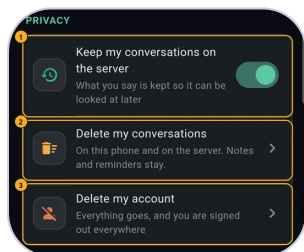

Privacy and your data

What FarryOn keeps, what it never does, and three controls in the app: stop keeping your conversations, delete them, or delete your whole account. No email to us needed.

In short

Never kept	Kept for you
Your voice — it's streamed only while a session runs and never stored. Photos you ask about — used to answer, then dropped. Your email and Telegram logins — they stay in your phone's secure storage.	Notes, reminders and saved contacts you made on purpose. A text record of your conversations — only while the switch below is on.

1 Where to find it

Open the menu  → **Settings** and scroll to **Privacy**:

- 1 **Keep my conversations on the server** — on or off (step 2).
- 2 **Delete my conversations** — wipe what was kept (step 3).
- 3 **Delete my account** — everything goes (step 4).

2 Keep my conversations — on or off

It's **on** to start with: a text record of what you said and what Farry answered is kept on our server, so it's there on any phone you sign in on.

Switch it **off** and from then on:

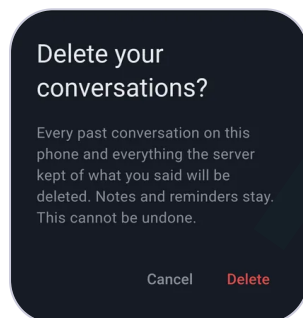

- the server keeps **nothing** of what you say;
- its tool log only notes that a tool ran — not what was in it;
- no record of the text of messages Farry sends for you.

Notes and reminders you ask for are still saved — you asked for those on purpose.

Your phone keeps its own copy. The switch is about our server. Your past chats still appear on this phone in **Your stuff** → **Conversations**, until you delete them there or with *Delete my conversations*.

Turning it off doesn't delete the past. What was kept before stays until you delete it (step 3).

3 Delete my conversations

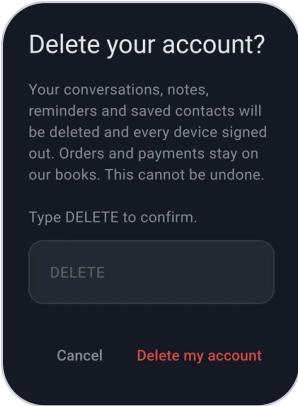

Tap **Delete my conversations**, then **Delete**.

Every past conversation **on this phone and on the server** is deleted, along with the tool log and sent-message records. Your notes and reminders stay.

This cannot be undone.

4 Delete my account

Have a paid plan? Cancel it first. Settings → Subscription → Cancel subscription (Part 7). Deleting the account doesn't stop the subscription by itself.

- 1. Tap **Delete my account**.
- 2. Type **DELETE** in the box.
- 3. Tap **Delete my account**.

Your conversations, notes, reminders and saved contacts are deleted, and you're signed out on **every** phone. Orders and payments stay on our books, for our accounts. You can sign up again later with the same email — as a new, empty account.

This cannot be undone.

5 How long things are kept

What	How long
Conversation record	Until you delete it — only kept while the switch is on
Tool log (which tool ran, and whether it worked)	30 days, then deleted by itself
Record of messages sent for you	7 days, then deleted by itself — none with the switch off
Notes, reminders, saved contacts	Until you delete them, or your account
Voice and photos	Never stored

The full detail is in our [privacy policy](#).

If something goes wrong

What you see	What to do
"Couldn't reach the server — nothing was deleted"	Check your internet and try again. Nothing was half-deleted.
"Please sign in again"	Your sign-in expired. Sign in, then try again.
The <i>Delete my account</i> button does nothing	Type DELETE exactly in the box first.
Old chats still show after switching off	That's this phone's own copy — use <i>Delete my conversations</i> .

Still stuck? Message us on WhatsApp — a real person answers.
